

Columbia Basin Management Decision

- Align with management goals. Management wants to make a decision in a few years, does habitat restoration and other restoration measures lead to recovery for listed species? Do these measures offset the mortality of the hydrosystem?

On Target?

- Does your planned portal assist management to make the decisions it needs to make?
- 

Existing Long Term Historical Monitoring Data Web sites

- Competing to supply conservation data?
Check various databases of record at DART,
FPC, PTAGIS, StreamNet, USACE.
- 

Add Functionality?

- Data request driven portal expansion,

Use Home Field Advantage

- Log IP address of incoming ISP, not client, name jpg or table, build on server, download to client, add number of seconds after midnight to ISP IP address for file name. Build log crawling program that looks up the domains for the incoming ISPs (nslookup or equivalent), stores the pair in a database using the blob data type.

Basic Traffic Analysis

- Basic traffic analysis, web trends or equivalent, 10 most requested pages, 10 most frequent ISPs.
- 

Sport Fishermen

- A link helpful to Sportsfishermen on your front page will boost traffic volume more than any other constituency.
-
